

AHS NATIONAL DISPLAY GARDENS - ROAD TRIP!

Danny Lawson

Danny is Editor of the American Hosta Society *Hosta Journal*.

Danny will share photos and short video clips from 30 of the 31 AHS Display Gardens he has visited over the past few years. The last one, in Moscow Idaho, will be visited in late spring '27. Then his quest will be complete . . . until the next new one comes along.

Stumpery For The Hosta Garden.

Philip Timm

Phil is President of the Wisconsin Hosta Society and Director at Large of the MRHS

The latest craze spreading across the country is using stumperies. Stumperies are the use of fallen logs, hollow logs, contorted branches and tree roots to enhance, beautify and to naturalize the garde. A stumpery can be used as sculptural interest, natural interest or both at the same time. After this presentation you will never see a fallen tree, branch or tree root the same way again. You need to jump on board this latest garden trend and “stumpify” your hosta garden.

Rare Hostas You Have Never Seen Before!

Don Rawson is the Nomenclature Co-chair, Genus Hosta for the American Hosta Society and a frequent contributor to the *Hosta Journal* and other publications.

Don’s presentation features some amazing cultivars, many of which have been around for decades, that are in a very limited number of gardens. These particular hostas are wonderful, garden-worthy plants that should be distributed more widely.
